

Amberon were awarded a place on the Traffic Management Framework for the main TMC contractor on the Hampshire County Council contract in October 2014.

Amberon were bought in as a third supplier to bolster the supply-chain solution for TM on the contract. During the 14 months that have followed Amberon have been able to provide an exceptional service focused around quality, value, innovation and a focus on Health & Safety.

The continued good performance and value Amberon provide has seen the company move to the top of the suppliers list. As well as supplying low speed rural & urban traffic management solutions the contract requires regular supply of high speed services.

Following the building of a good and reliable relationship on the Hampshire framework Amberon started to get requests from other contractors in the area to complete High-speed TM for them:

Amberon now regularly undertake High Speed TM in the region using the latest Impact Protection Vehicles and following the HSE's advice for double vehicle working. All works are supervised by fully qualified TSCO's or TM Foreman.

*"I was supremely impressed with the High Speed team that we sub-contracted from Amberon for the St. Pauls Roundabout work. The work consisted of lane 1 and 2 closures on all 4 approaches to the roundabout allowing Amberon to take out the outer circle to allow us to safely lay our road markings.*

*The communication we had from Amberon throughout the process was second to none and they seemed to understand what we required from them on site from the outset. I wouldn't hesitate to recommend Amberon for high-speed work."*

Chris Warren, Contracts Manager, Wilson & Scott (Highways) Ltd.
